

Mounir Koussa graduated from the University of Arizona in 2011 with a double major in Chemistry and Biochemistry. He worked in the labs of Leslie Tolbert and Lynne Oland, studying the role of glial cells in the development of the antennal lobe of the moth. This prepared him for his graduate studies at Harvard, where he received his PhD in neurobiology studying the biophysics of the inner ear. Mounir is now a co-founder and the VP, R&D at Vital Biosciences, which is democratizing health testing by bringing routine lab tests where and when they are needed. Vital Bio is Mounir's second company, and he brings to it core assets that he developed at his first company, Confer Health, which Mounir spun out of his PhD.
